

SANITARY SOLUTIONS

Traulsen's advanced sanitary solutions enable operators to make food production as safe as possible when utilizing refrigeration equipment. Unique features help reduce the spread of germs and prevent potential cross-contamination, all while supporting the demands of even the toughest kitchen environments.

ENHANCE FOOD SAFETY

EZ-OPEN FOOT PEDAL

The ergonomically positioned EZ-Open Foot Pedal enables operators to open the cabinet by simply pressing a lever with the ball of the foot, providing no-touch door openings. This door-opening method reduces the spread of germs through frequently touched surfaces and mitigates the risk of cross-contamination from accidental spills.

EZ-CLEAN GASKETS

These special gaskets are sanitizer friendly, unlike typical PVC, and its proprietary one-fold design makes it simple to see and eliminate dirt and mold. Lab testing shows EZ-Clean Gaskets last four times longer than traditional PVC gaskets.

GLASS DOOR MODELS

Easily view contents through glass doors, minimizing the need for excessive door openings and helping to decrease the spread of germs through frequent contact areas.
