

MAKE THE MOST OF THE SUMMER SLUMP

Why you should get service while the kids are gone.

1. Proper Shut Down Methods

While not in use for extended periods of time, make sure to properly shut down your equipment. Following the correct procedures for shut down helps to protect your equipment from damage and provides easier start-up when the school year resumes.

Find the following shut-down procedures for your machine [here](#).

2. No Disruptions to Employees or Students

Allowing Hobart Service technicians to work on your equipment during the summer prevents them from getting in the way of employees or students. The technicians are able to perform extensive maintenance efficiently and effectively, without disrupting school hours.

3. Machine Lasts Longer

Consistent preventative maintenance keeps your equipment running at peak performance and lengthens the lifespan of the machine. Protecting your equipment before problems arise allows the machine to continue doing its job.

4. Ready for the New School Year

Servicing your equipment during the summer ensures that your equipment is ready during the year and reduces unplanned downtime. There are many students who depend on their school cafeterias. Preventative maintenance means your kitchen will not fail you or your students.
