

AUTOMATIC SOIL REMOVAL - TECHNOLOGY FOR CLEANER WATER

Heavy food soils are filtered during the wash cycle, allowing less pre-scraping.

Food soils are actively pumped from the wash tank so wash water stays cleaner, longer.

External scrap basket allows easy waste removal between washes.

Reduce Wash Water Changes Up To 50%

Automatic Soil Removal (ASR) actively pumps food soil from the wash tank to keep wash water cleaner, longer, with fewer tank fills per day.

Save up to \$522 per year on water, energy, and chemicals, and reduce pre-scraping labor time up to 20%.

EXPERIENCE REAL WATER AND LABOR SAVINGS FOR YOUR OPERATIONS*
