

EZ-CLEAN GASKETS

EZ SOLUTIONS FOR OPERATORS

Traulsen's exclusive EZ-Clean Gaskets have a simplified design that requires minimal effort for cleaning. Unlike traditional PVC gaskets that contain multiple creases and folds, these gaskets feature a proprietary one-fold design that makes it easy to find and eliminate dirt and debris trapped in the fold.

The chemical resistant material makes them safe to clean with choride based sanitizers without risking damage to the gasket, promoting enhanced sanitization efforts. The combination of the simplified design and durable material makes the cleaning process easy and prolongs gasket lifespan.

Remember too, a good gasket is important for maintaining a good seal for the door so the cooler cools efficiently.

KEY BENEFITS

SUPPORT SANITARY EFFORTS:

The simplified one-fold design makes it easy to identify and clean contaminants within the gasket which could potentially harm product stored within.

SAVE TIME AND EFFORT:

The heat and chemical resistant material enables a quick cleaning process with the use of just sanitizer and a washcloth. No additional tools are required.

SAVE MONEY:

In certified lab testing, the EZ Clean gasket lasted up to four times longer than PVC, allowing operators the benefit of less frequent replacement, saving money in the long run.
