

# STEAMERS – TIPS & TRICKS

## 1. “Ready” Set Steam

The “ready” light indicates the steamer is up to temperature. There is no need to pre-heat using constant steam mode.

## 2. Confirm Water Connections

Trace incoming water lines and confirm the presence of scale filtration. Maximum pressure of 60 PSI.

## 3. Minimize Drain Path

The drain line should slope 1/4” per foot and should not exceed a 6-foot run. Discharge to include air gap.

## 4. Open Doors When Not In Use

This allows the door seal(s) to recover their original profile to minimize fatigue and ensure optimal sealing fit.
